1 Biggest Challenge so far?

My biggest challenge so far has been battling CentOS and trying to figure out why it's not working for me, allowing me to file share or ping. Another challenge that I've been having is having to constantly go back and review old coursework material as a refresher or going down a rabbit hole trying to understand a topic which ends up taking too much time.

2 Moment you were most proud of so far.

A moment that I'm the most proud of so far is that I'm actually taking the time to understand linux in depth and I'm proud of my documentation, I was comparing my most recent documentation in this course comparing it to a course I took two years ago and I've improved greatly on writing documentation, I actually like to go back and review my documentation for this course if I need a refresher. Also, I'm most proud of my github profile.

3 One thing you will do to improve for the second half of the class.

One thing I'll do to improve for the second half of the class is spend more time working on my coursework and review the posted links on blackboard, perhaps view the first half of the links on one day then the second half of the links on the second day so I won't feel overwhelmed and to take more notes.

4 One new thing you've learned so far

One thing I learned so far is how to use github and creating my portfolio profile, I've always wanted to become active on github because it's a great way to show off your skills but I've always held off on learning how to use it, yesterday I was able to dedicate a few hours and watch some youtube videos on the basics of it, creating a portfolio on it and I was able to create the portfolio I have now by following a tutorial. Lastly, I learned more about virtualization and how it works.

5 One thing you want to add or change to make this portfolio better for the final

One thing I want to add to my portfolio is more projects and things to show off. I would also like to customize it more and give it more color rather than being black and white.
